Investment Summary

- The AB-ICI increased 4.7% last month owing to the ongoing rally on Russian financial markets
- Capital outflows from Russia stabilized, preventing economic confidence from plunging further
- Strong CPI acceleration in January confirms high inflationary risks for the AB-ICI this year

AB-ICI growth continued with 4.7% m/m increase entirely due to strong markets

Economic confidence stabilized but remains low

Russian market inspired by high commodity prices

AB-ICI added 4.7% thanks to improved market sentiment

The AB-ICI continued to post strong growth, adding 4.7% last month after increasing 5.8% the previous month thanks to the rally on financial markets and increasing inflows to Russia-dedicated funds. While the capital outflow stabilized in December, the full-year outflow of \$38.3bn highlights the low level of economic confidence in Russia.

- **Economic confidence** remained stable after falling steeply the month before, as Russia managed to stabilize capital outflows in December. At the same time, the full-year capital outflow from Russia of \$38.3bn exceeded official expectations of \$29bn, which highlights Russia's poor attractiveness to foreign capital. Moreover, despite the outflow, corporate foreign debt increased by \$15bn, indicating that no deleverage took place, which poses a threat to the capital account in 2011;
- **Foreign confidence** remained flat, as no relevant FDI data has been released;
- **Market confidence** continued to grow, as Russia-dedicated funds managed to attract \$1bn in the last several weeks beating other emerging market peers. This favorable attitude towards the Russian market is explained by the very high oil price range of \$90-100/bbl, which allowed local bond and equity markets' growth to catch up after lagging during 2H10.

Inflation: The key threat to the AB-ICI in 2011

GDP growth of 4.0% mainly explained by restocking

January news flow suggests that 2011 will be a tough year for the AB-ICI. While Rosstat's first estimate of 2010 GDP growth of 4.0% y/y exceeded our and the market's expectations, the composition of this growth does not guarantee the same strong result this year. The key growth driver was the 24.3% increase in gross capital formation, which, however, includes only 3.5% growth in fixed investments (vs. our expectations of 5.0%), suggesting that the remaining contribution to growth was from stockbuilding. The poor investment figure corresponds to the 0.9% decline in construction sector output, which suggests that real investment demand in Russia has yet to recover.

Faster inflation resulted in disappointing 4.3% y/y real income growth

Consumption was also weaker than we expected on faster inflation, which came in at 8.8% in 2010. Retail trade increased 4.4% y/y and real disposable income was up only 4.3% y/y vs. our expectations of 5% y/y growth each. Income growth is particularly weak if we bear in mind that pensions were up 45% y/y in nominal terms in 2010, an increase of around 35% y/y growth in real terms. As pensions will only be indexed 10% y/y and social taxes have been increased effective January 2011, we maintain our real income forecast for 2011 of 3.0% y/y.

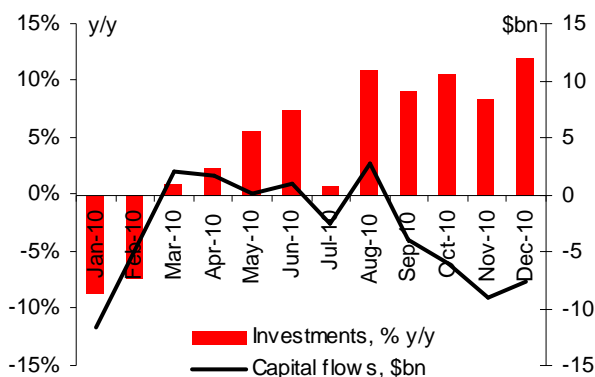

Capital outflow of \$38.3 bln and 18% drop in FDI in 9M10 means economy not ready to digest new money

Squeezed final demand on both consumption and investment sides meant the economy was unable to digest the available cheap liquidity. FDI flows to Russia were also down, falling some 18% y/y. Capital outflow in 1H10 was \$11.4bn, while the full-year figure totaled \$38.3bn, which was substantially worse than the CBR's guidance of \$29bn. This capital outflow was particularly bad, as companies' foreign debt declined only \$2.8bn in 2010, while banks increased foreign obligations by \$17.6bn. This suggests that the corporate sector's foreign debt burden will not be relieved in 2011.

Higher oil prices helped to keep budget breakeven at \$109/bbl, but fuel inflationary risks

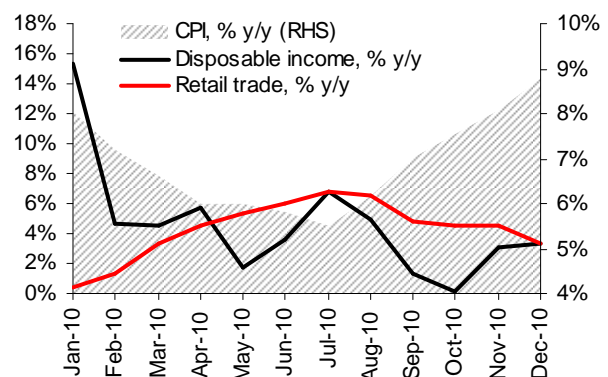

However, increased commodity prices helped the country to maintain a strong financial position. It was only thanks to the high oil price that CBR reserves managed to end the year at \$480bn. Higher-than-expected oil prices also allowed the cabinet to keep the budget breakeven oil price at \$109/bbl. Also, the reserve fund closed the year with \$25bn vs. the expected \$10bn. This enabled the ruble to finish the year at RUB30.5/\$ and the current account surplus to total \$72 bln. The flip side of this, however, is the risk of higher inflation, particularly given the jump in global agricultural prices.

Figure 3: RDI and trade vs. CPI

Source: Rosstat, Alfa Research

The environment of slow economic growth combined with almost double-digit inflation and unclear prospects in terms of capital flows highlights the risks faced by Russian economy and AB-ICI for 2011.
